

MORE WATCH LOGS ON FILIBUSTERS.

Uncle Sam's Fleet in Florida Waters to Be Substantially Increased.

The Dolphin and the Dynamite Gunboat Vesuvius Pressed Into Service.

A Determined Effort Will Now Be Made to Prevent Any More Expeditions to Cuba.

TORPEDO BOATS MAY BE USED.

Cushing and Ericsson Admirably Adapted for Cruising Among the Keys and Lagoons—Vesuvius's Great Speed Valuable.

Washington, Jan. 2.—Increased vigilance in the filibuster patrol along the Florida coast is to be exhibited by the Government, and no effort is to be spared to prevent the violation of neutrality. Not only have the orders for the return North of the cruiser Newark at Key West been countermanded, but orders have been issued for the dispatch boat Dolphin, heretofore utilized wholly as an executive yacht, to proceed to the Florida coast at once, and she is expected to leave the Washington Navy Yard late tonight for her new duty.

As soon as she can be made ready the dynamite gunboat Vesuvius will be sent to supplement the naval and revenue cutter force, and, if necessary, the torpedo boats Cushing and Ericsson will speedily follow.

CRISIS IN SPAIN AT HAND.

Continued from First Page.

is incomprehensible. If Congress will ask for records in Secretary Olney's possession, showing the Spanish attempt to unite Europe against America, and will also investigate the failure of the State Department to present the claims for damages against Spain, Cleveland's Administration will be promptly unmasked.

Why Has This Claim Not Been Pressed?

Let Congress demand the correspondence in the Delgado case, and force Olney to tell why that case is not now being pressed. Melguizo, who slapped the face of Delgado when the latter's hands were tied, who threw his certificate of American citizenship to the ground, and then ordered him to be shot, without accusation or trial, has been promoted to be Major-General, while his helpless American victim hobbles about on crutches. Let Congress ascertain why Spain has given no assurance of reparation for this appalling crime. The facts are in my possession, and I believe Congress ought to know them. If the facts of the Delgado case up to date were made public Olney would hang his head in shame.

Minister De Lome has dominated American diplomacy. Proclamations of reforms in Porto Rico and talk of American mediation is part of the plan to delay the action of Congress and at the same time to meet the growing power of Sagasta and the Liberals.

Canovas has said that he fears Sherman as Secretary of State. He knows that Sherman is a thorough American and cannot be controlled by De Lome, but he does not yet realize how little

driven from every other throne in Europe.

Already discontented men in Spain are beginning to buy arms. Yesterday I stood in sight of a Government factory at Toledo, where swords are made to drink the blood of the innocent in Cuba, and saw hanging on the walls of an ancient church the chains which bound Christian captives in Grenada. Yet within that church is the council chamber where the Inquisition condemned heretics to be burned alive. It was typical of Spain.

Last night I saw women and children sleeping on the sidewalks of Madrid in all this bitter weather. This is Spain at the close of the nineteenth century.

CANOVAS WILL RETIRE.

Minister Taylor Notifies the State Department of a Change in Spain's Cabinet Soon to Be Made.

Washington, Jan. 2.—Minister Taylor has advised the State Department that the Cabinet crisis at Madrid is far more acute than even the Spanish Liberal papers have announced. Within a month, unless signs fail, there will be a change of Ministry and Sagasta will be again called into power. Minister De Lome sees this and is preparing for the change which will inevitably follow in the Spanish Legation at Washington. Who will be his successor is not known, though Senor Sagasta, formerly First Secretary of Legation here and now Minister to Colombia, is mentioned.

Members of the Cuban Junta feel sure now of winning their fight. They say that Weyler can inflict no serious damage before the rainy season begins in April. They report that the Spanish soldiers still sell to the insurgents cartridges, rifles and occasionally a cannon. Empty shells picked up in deserted insurgent camps show the stamp of the Spanish Government cartridge factories, and Mauser ammunition will fit one-third of the rifles in the patriot armies. A letter from Gomez recently received in Washington states that before the wet season begins he will have 60,000 men under arms.

In consequence the medical staff of that institutions, and physicians who are on intimate terms with members of the staff visited the Morgue yesterday to see the body of the woman whose life ended so strangely.

She had been afflicted scarcely a week when she walked into the hospital on Thursday afternoon with her brother, Thomas Kane, and was admitted to the woman's ward by Dr. Humphreys. She was examined by Dr. E. H. Gardner, and gave this simple history of her ailment. She been attacked Sunday by a grievous itching on the lower part of her legs. She scratched the affected parts and cut through the inflamed skin with her finger-nails. At that spot a purple spot appeared and spread widely. The itching extended to other portions of her body and varic-colored spots appeared.

Her Strange Sensations.

On Thursday the sensation was as if she was being stuck by innumerable needles. She had loosened her clothing, but found that the absence of pressure increased the pricking. Blood flowed from her mouth constantly, and when her clothing was removed it was seen that from her waist up she was tattooed by the strange disease in dull red, yellow, purple and black spots, varying in size from a pin-head to an inch in diameter.

She was put to bed and the nurses waited that her disease was malignant and contagious. The house physician immediately telephoned for the consulting physician, Dr. Lamb, but nothing could be done to check the progress of the disease. It resisted all remedies and before night the blotches had increased in size and had become vivid purple. The arms, hands, legs and feet were affected and the spots appeared on the face and were apparent on the head when the hair was separated.

Miss Kane became unconscious during the night and died Friday morning. Her autopsy justified the diagnosis, showing that the conditions existed which are peculiar to purpura haemorrhagica and of which the case of the woman who died in the hospital is a complete breaking down of all parts of the circulatory system.

The heart is a hard muscle which when pressed by the finger is deformed for the moment. Miss Kane's heart was so soft that instead of denting it permitted the finger pressed against it to sink in and pass through its substance as if it were made of butter. The walls of the arteries were so thin and porous that the blood was not held within the vessels, but had lost the coagulating quality.

MACKAY'S COOK'S STRANGE MALADY.

Marvel of Health Falls Victim to Disease and Dies in Five Days.

Case New to Bellevue, and Few Physicians Have Seen One Before.

Heart Soft as Butter, and Arterial Walls So Porous the Blood Leaked Through.

PURPLE SPOTS ON FACE AND BODY.

Cause a Mystery, but Medical Theorists Think She May Have Introduced the Virulent Poison of Decomposed Matter Into a Wound.

Sarah Kane, born in Ireland, lived twenty-two years in New York and fifty years on this earth without achieving other distinction than being assistant cook to John W. Mackay, multi-millionaire. She died in Bellevue Hospital Friday of a disease so rare that in death she is famous.

Purpura haemorrhagica (a flow of purple blood) is a disease so seldom seen that each case which falls under the observation of an intelligent physician is carefully reported. Thus the literature is voluminous, but the number of physicians who in hospital or practice have seen cases is very small. This is especially true of American physicians. In Europe there have been—this is apparent from the literature—a much larger number of cases than in America.

In Bellevue Hospital there is no record of a single case prior to the arrival of Sarah Kane. Bellevue has a large number of cases and a greater variety of diseases than any other hospital in America.

In consequence the medical staff of that institutions, and physicians who are on intimate terms with members of the staff visited the Morgue yesterday to see the body of the woman whose life ended so strangely.

She had been afflicted scarcely a week when she walked into the hospital on Thursday afternoon with her brother, Thomas Kane, and was admitted to the woman's ward by Dr. Humphreys. She was examined by Dr. E. H. Gardner, and gave this simple history of her ailment. She been attacked Sunday by a grievous itching on the lower part of her legs.
